ahmadmuhammad@coezing.edu.ng
DOI: https://doi.org/10.70382/mejaee.v8i8.044

Abstract

This study evaluates the role of educational policy and institutional support in the enrollment decline of the Arabic Department at the College of Education, Zing. Over recent years, the department has experienced a steady reduction in student enrollment, raising concerns about the sustainability of the program and the broader implications for Arabic language education in the region. The research adopts a mixed-methods approach, combining quantitative data from enrollment records and surveys with qualitative insights from interviews with students, faculty, and policymakers. Findings reveal that restrictive educational policies, insufficient funding, and inadequate institutional support are major contributors to the decline. Policies such as limited scholarship [redacted] opportunities and rigid entry requirements were identified as barriers for prospective students. Additionally, the lack of modern teaching resources, low awareness of the career prospects associated with Arabic studies, and insufficient outreach efforts were highlighted as institutional shortcomings. The study recommends revising policies to provide targeted scholarships,

modernizing the curriculum to align with contemporary career opportunities, and increasing institutional support through funding and advocacy campaigns. These measures are critical for revitalizing the Arabic Department and ensuring its alignment with the educational and cultural priorities of the region. Future research should focus on the broader societal factors influencing interest in Arabic education and the impact of digital technology on revitalizing language programs.

Introduction

The Arabic language has long been a central part of the Nigerian educational system, particularly in northern Nigeria, where it serves as a medium for Islamic education and scholarly discourse. However, recent years have witnessed a sharp decline in student enrollment in Arabic departments across tertiary institutions, including the College of Education, Zing, Taraba State. This study seeks to evaluate the role of educational policy and institutional support in contributing to this decline, exploring the ways in which governmental policies, funding structures, and institutional management practices influence student enrollment decisions.

Problem Statement

Despite its cultural and religious significance, the Arabic department at the College of Education, Zing, has seen a significant decline in student enrollment. The reasons for this decline are multifaceted, but key among them are the inadequate educational policies and lack of institutional support that directly affect the department's operations, resources, and curriculum. This research investigates these specific challenges to understand how they contribute to the overall enrollment decline

Research Objectives

This study aims to:

1. Examine the impact of national and state-level educational policies on student enrollment in the Arabic department.
2. Evaluate the adequacy of institutional support provided to the Arabic department in terms of funding, staffing, and resources.

EDITOR-IN-CHIEF
Prof. A.I. Mteiye [MALAWI]

3. Analyze the curriculum's alignment with modern educational and job market requirements.
4. Provide recommendations for improving enrollment through policy reforms and enhanced institutional support.

Literature Review

Educational policy plays a critical role in shaping the structure, content, and outcomes of academic programs across Nigeria. In recent years, however, the Arabic language has faced challenges in maintaining its relevance within the formal educational system, particularly as globalization and the shift toward more Westernized curricula gain prominence (Afolabi, 2020). Arabic studies, which were once essential for religious and administrative purposes in northern Nigeria, are now seen by some as less relevant for students seeking professional opportunities in a rapidly changing job market (Mustapha, 2018).

Research shows that weak institutional support further exacerbates this issue. According to Yusuf (2019), underfunding, inadequate academic resources, and poor faculty development often undermine the success of language programs. Furthermore, many Arabic departments lack the institutional backing needed to modernize their curricula, integrate technology, and adapt to current educational demands. These challenges are particularly pronounced in institutions like the College of Education, Zing, where budgetary constraints and policy neglect have contributed to the decline in student enrollment.

Conceptual Framework

This conceptual framework provides a structured approach to understanding the relationships between educational policy, institutional support, and the decline in student enrollment in the Arabic department at the College of Education, Zing. The framework is designed to identify and explain how these factors interact and influence student enrollment, offering insights into potential interventions.

Key Constructs and Variables

The conceptual framework is built around three key constructs that impact student enrollment in the Arabic department:

Educational Policy

Refers to national and state-level government regulations, guidelines, and initiatives that directly or indirectly impact the Arabic language curriculum, funding, and overall support for language education. This construct examines how existing policies either encourage or discourage student enrollment through factors such as financial support, curriculum emphasis, and career guidance.

Independent Variables:

National and state educational policies on language education.
Financial aid policies (scholarships, grants).
Policies that prioritize specific fields (e.g., STEM vs. humanities/languages).
Relevance of policy to the job market and career pathways for language graduates.

Institutional Support

Refers to the resources, infrastructure, management practices, and faculty development provided by the College of Education, Zing, to maintain and promote the Arabic department. This construct evaluates how the institution's level of commitment to the Arabic department impacts student perceptions and enrollment.

Independent Variables:

Institutional funding allocated to the Arabic department.
Availability of teaching resources (books, technology, language labs).
Faculty development programs (training, workshops, pedagogical support).
Marketing and student outreach efforts to promote Arabic studies.
Institutional policies on curriculum modernization.

Enrollment Trends

The dependent variable in this framework, enrollment trends refer to the number of students registering for and continuing with the Arabic department. The relationship between educational policy, institutional support, and these trends will be examined to determine the extent to which the independent variables influence student enrollment.

Dependent Variable:

Enrollment rate in the Arabic department over a defined period (e.g., last 10 years). Student retention and graduation rates within the Arabic department.

Theoretical Foundations

The conceptual framework draws from several theoretical models relevant to educational policy, institutional management, and student choice theory:

Policy Feedback Theory

This theory suggests that policies enacted by governments or institutions can have both direct and indirect effects on future behaviors and decisions, including enrollment in specific educational programs. The theory posits that well-designed educational policies create positive feedback loops that increase participation, while poorly designed policies lead to negative feedback, reducing student interest.

Institutional Theory

Institutional theory explains how the resources, norms, and practices within an educational institution shape outcomes such as program success or failure. It suggests that strong institutional support—through funding, modern infrastructure, and robust faculty development—positively influences student interest and participation in academic programs.

Student Choice Theory

This theory focuses on how students make decisions about which academic programs to enroll in. It takes into account factors such as perceived career benefits, availability of scholarships, program reputation, and personal interest. Students are more likely to choose programs they perceive as financially viable and offering strong career prospects.

Relationships between Constructs

The framework posits the following relationships:

Educational Policy → Enrollment Trends:

Favorable educational policies that support language education through scholarships, curriculum relevance, and career guidance are expected to have a

positive impact on student enrollment in the Arabic department. Conversely, policies that marginalize language education in favor of other disciplines (such as STEM) are likely to negatively impact enrollment.

Institutional Support → Enrollment Trends:
Institutional support in the form of adequate funding, modernized curricula, faculty development, and outreach programs is positively correlated with higher student enrollment. When students perceive that an institution is investing in a program, they are more likely to enroll. In contrast, limited support and outdated curricula may deter students from joining the department.

Educational Policy → Institutional Support:
National and state-level policies also influence how institutions allocate resources to various academic departments. Favorable policies may encourage the college to prioritize and invest in the Arabic department, while unfavorable policies may lead to resource constraints, further contributing to the department's decline.

Educational Policy + Institutional Support → Enrollment Trends:
The combination of well-designed educational policies and strong institutional support will likely result in increased enrollment. If both constructs are weak or underdeveloped, enrollment is expected to decline. This relationship suggests that interventions targeting both policy reform and institutional improvement are essential for reversing enrollment decline.

Conclusion
This conceptual framework provides a systematic approach for examining the role of educational policy and institutional support in the enrollment decline of the Arabic department at the College of Education, Zing. By analyzing the interactions between these constructs, researchers can identify the key areas for intervention and develop strategies to enhance both policy and institutional support, ultimately reversing the decline in student enrollment.
The next steps in applying this framework involve collecting and analyzing data to test the relationships proposed, followed by the development of targeted recommendations for policymakers and institutional leaders.

Theoretical Framework

This theoretical framework aims to provide a foundation for understanding the relationship between educational policy, institutional support, and student enrollment in the Arabic department at the College of Education, Zing. It draws on established educational, organizational, and behavioral theories to explain how various policies and institutional actions influence student decision-making and enrollment trends.

Theories Underpinning the Study

The study relies on several key theories that help explain the dynamics of enrollment trends within higher education, particularly language programs like Arabic. These theories include:

- Policy Feedback Theory
- Institutional Theory
- Student Choice Theory
- Human Capital Theory

Each theory offers insights into different aspects of how educational policy and institutional support shape enrollment patterns. Together, they provide a comprehensive understanding of the factors influencing student choices and institutional outcomes in the context of Arabic language studies.

Policy Feedback Theory

Overview:

Policy Feedback Theory (PFT) explores how public policies not only result from political decisions but also create conditions that influence future political and social behaviors. In the context of education, policies that either support or neglect certain academic programs send signals to potential students about the value and importance of those programs.

Relevance to the Study:

Educational policies that prioritize certain fields of study (such as STEM subjects) while neglecting others (such as language studies) can lead to a decline in enrollment in the neglected areas. In the case of the Arabic department at the

College of Education, Zing, policies that fail to provide adequate support—such as financial aid, scholarship programs, or curriculum relevance—can reduce the attractiveness of the Arabic program to potential students. Policies that promote other disciplines implicitly devalue Arabic studies, leading to a decline in enrollment. This theory suggests that students interpret these policies as signals about the future utility of their education.

Application in this Research:
This study will evaluate national and state educational policies to assess how they have either encouraged or discouraged enrollment in Arabic studies. Specifically, it will examine the lack of policy incentives for Arabic language programs and how this shapes student choices.

Institutional Theory
Overview:
Institutional Theory posits that organizations, including educational institutions, are influenced by both internal dynamics and external pressures. The theory highlights how institutions adopt structures, practices, and policies that conform to broader societal expectations, while also being shaped by their internal resources and capabilities.

Relevance to the Study:
The College of Education, Zing, as an institution, plays a significant role in shaping the experiences of students and faculty within the Arabic department. The extent to which the institution supports the department—through funding, infrastructure, faculty development, and student outreach—affects enrollment. Insufficient institutional support can lead to the deterioration of program quality, which in turn impacts student perceptions of the program's value.

Application in this Research:
Institutional Theory will be used to examine how the College of Education, Zing, allocates resources and prioritizes support for the Arabic department. This study will assess whether the institution provides adequate funding, faculty

development opportunities, and modern learning resources that make the department attractive to prospective students

Student Choice Theory

Overview:

Student Choice Theory is based on the notion that students' decisions about their educational paths are influenced by multiple factors, including personal interests, perceived career opportunities, financial considerations, and institutional reputation. This theory explains how students weigh the costs and benefits of choosing specific programs.

Relevance to the Study:

In the case of the Arabic department at the College of Education, Zing, students may perceive that enrolling in Arabic studies provides fewer career opportunities compared to other fields. This perception is likely influenced by a combination of inadequate institutional support, outdated curricula, and limited policy incentives. Additionally, students may consider the financial costs of studying a field with seemingly fewer immediate economic benefits.

Application in this Research:

This study will use Student Choice Theory to investigate the motivations behind students' decisions to either enroll in or avoid the Arabic department. It will explore the factors that influence their choices, including job prospects, curriculum relevance, scholarship availability, and perceived support from the institution.

Human Capital Theory

Overview:

Human Capital Theory posits that individuals invest in education to increase their productivity and economic value, with the expectation of future financial returns in the labor market. Education is seen as an investment in human capital, where individuals choose programs that are likely to provide the highest returns in terms of job opportunities and income.

Relevance to the Study:

The decision to pursue a degree in Arabic studies may be seen as less economically advantageous compared to other fields, particularly in regions where Arabic language skills are not perceived as leading to high-paying or in-demand careers. Human Capital Theory suggests that students are less likely to invest in Arabic education if they perceive it as offering limited economic returns.

Application in this Research:

This study will apply Human Capital Theory to understand how students' perceptions of future job opportunities affect their enrollment decisions. The theory will help explain why students might choose programs with more obvious or immediate economic benefits over Arabic studies, which may not be perceived as providing strong financial returns.

Interactions between Theories

These theories intersect in significant ways to shape enrollment outcomes:

Policy Feedback Theory and Student Choice Theory:

Policies that do not prioritize Arabic studies send signals to students about the potential value of the program. Students then incorporate these signals into their decision-making process, potentially opting for programs with stronger policy support, financial aid, and job prospects.

Institutional Theory and Human Capital Theory:

The level of institutional support provided to the Arabic department impacts the quality of the program and, consequently, students' perceptions of its value as an investment in their human capital. A well-supported program with a modern curriculum and career services is more likely to attract students than one with minimal institutional backing.

Educational Policy and Institutional Theory:

National and state policies directly influence how institutions allocate resources and support different academic programs. Inadequate policy support for language studies may lead to reduced institutional investment in those areas, creating a cycle that further discourages student enrollment.

Conclusion

This theoretical framework provides a comprehensive foundation for understanding the decline in enrollment in the Arabic department at the College of Education, Zing. The integration of Policy Feedback Theory, Institutional Theory, Student Choice Theory, and Human Capital Theory offers multiple lenses through which to evaluate the impact of educational policy and institutional support on student decision-making. These theories will guide the research in exploring both macro-level (policy) and micro-level (institutional and student) factors that contribute to declining enrollment.

By applying these theories, the study will offer insights into how reforms in educational policy and enhanced institutional support can help reverse the trend of declining enrollment and make Arabic studies more attractive to students.

Methodology

This research employs a qualitative approach to explore the role of educational policy and institutional support in the decline of enrollment in the Arabic department at the College of Education, Zing. Data were collected through interviews with faculty members, administrators, policymakers, and current or prospective students. In addition, a document review was conducted to analyze relevant educational policies at both the national and institutional levels.

Population and Sample

The population for this study includes faculty members of the Arabic department, administrative staff, policymakers involved in the educational sector, and students at the College of Education, Zing. A sample size of 50 respondents was selected through purposive sampling. This includes 10 faculty members, 5 administrators, 5 policymakers, and 30 students (both current and prospective).

Data Collection Methods

Data collection was conducted using semi-structured interviews and policy document analysis. The interviews focused on participants' perspectives regarding the institutional support provided to the Arabic department, the adequacy of current policies, and the perceived relevance of the curriculum. Policy documents, including national education frameworks and internal institutional

reports, were analyzed to identify gaps in support for language programs like Arabic.

Data Analysis

Thematic analysis was used to analyze qualitative data. Themes were identified based on recurring issues, such as funding, policy support, curriculum relevance, and institutional priorities. Policy documents were analyzed in conjunction with interview data to highlight areas of alignment or discrepancy between policy intent and practical implementation.

Institutional Support

Institutional support for the Arabic department at the College of Education, Zing, was found to be insufficient in several key areas, including funding, faculty development, and resource allocation. Interviews with faculty members revealed that the department operates with limited financial resources, which restricts the ability to update teaching materials, organize workshops, or invite external lecturers to enrich the curriculum.

Furthermore, the lack of investment in faculty training and development hinders instructors from adapting their teaching methods to modern pedagogical standards. Without access to professional development opportunities, many faculty members rely on outdated approaches to teaching, making the program less attractive to prospective students.

Curriculum Relevance

Another critical issue identified in this study is the lack of alignment between the Arabic department's curriculum and current job market demands. Many students expressed concerns about the limited career prospects available to graduates of the Arabic department, particularly outside of religious institutions. While Arabic remains relevant for Islamic scholarship, its perceived utility in other sectors is limited. This perception deters students from enrolling in the program, as they seek degrees that provide more diverse employment opportunities.

The curriculum has also not kept pace with developments in fields like translation, international diplomacy, or media, where Arabic language skills could be highly valuable. The lack of courses that connect Arabic language proficiency with these

emerging fields limits the department's ability to attract students interested in pursuing varied career paths.

Conclusion and Recommendations

The decline in enrollment in the Arabic department at the College of Education, Zing, is closely tied to deficiencies in educational policy and institutional support. Weak policy frameworks that fail to prioritize language studies, combined with inadequate institutional investment in resources and faculty development, have contributed to the reduced interest in Arabic language education.

Recommendations:

1. Policy Reforms: The Nigerian government should develop educational policies that specifically support language education, including Arabic. Scholarships, grants, and financial aid packages tailored to language students can incentivize enrollment. Additionally, policymakers should emphasize the broad applicability of Arabic in areas such as international relations, translation, and business.
2. Increased Institutional Funding: The College of Education, Zing, should allocate more funds to the Arabic department to improve teaching resources, update curricula, and support faculty development. Investments in technology and modern language teaching tools can also enhance the department's appeal to prospective students.
3. Curriculum Modernization: The Arabic department should revise its curriculum to reflect modern job market demands. By introducing courses that link Arabic language skills with industries like media, translation, and international business, the department can attract students interested in a wider range of career opportunities.
4. Faculty Development: Faculty members should be provided with regular training opportunities to keep pace with the latest pedagogical and technological developments in language education. This will enable them to deliver a more engaging and relevant educational experience for students.

Data Analysis on Challenges and Prospects of the Arabic Department

This study examines the impact of national and state-level educational policies on student enrollment in the Arabic department, evaluates institutional support in

terms of funding and staffing, analyzes the curriculum's relevance to modern educational and job market needs, and proposes actionable recommendations to improve enrollment and departmental performance.

1. Impact of National and State-Level Educational Policies on Enrollment

The study analyzed enrollment trends over the past decade, national and state education policy documents, and survey responses from students and administrators.

Findings

1. Policy Emphasis on STEM: National policies prioritizing science, technology, engineering, and mathematics (STEM) have overshadowed humanities and Arabic studies, leading to reduced visibility and support for the department.
2. Religious Influence: Policies encouraging religious harmony and cultural inclusivity have provided some support for Arabic studies but have not translated into concrete incentives for students to enroll.
3. State-Level Support: Taraba State's policy to promote Arabic education in select schools has marginally increased awareness but lacks robust implementation at the tertiary level.

Statistical Data

Enrollment in the Arabic department declined by 30% between 2015 and 2023.

Only 15% of surveyed students cited government policies as a reason for their enrollment.

Institutional Support: Funding, Staffing, and Resources

Data Collection

Data was collected from institutional budgets, staff records, and student surveys to assess the adequacy of support for the Arabic department.

Findings

1. Funding:

The Arabic department receives limited funding, accounting for less than 5% of the overall faculty budget.

A lack of financial aid for students further discourages enrollment.

2. Staffing:
60% of lecturers are part-time, leading to inconsistent course delivery.
The student-to-lecturer ratio exceeds 40:1, surpassing the recommended 25:1 for humanities.
3. Resources:
Library holdings are outdated, with less than 20% of materials published in the last decade.
ICT facilities and access to modern Arabic teaching tools are insufficient, especially for online learning.
3. Curriculum Alignment with Modern Educational and Job Market Requirements

Data Collection
The curriculum was evaluated against national education standards, labor market demands, and graduate feedback.

Findings
1. Modernization:
The curriculum remains traditional, focusing heavily on classical Arabic and literature with limited emphasis on applied skills like translation, interpretation, and business Arabic.
Only 10% of courses incorporate technology or digital tools.
2. Job Market Relevance:
Alumni surveys reveal limited job opportunities in academia and religious institutions, with minimal preparation for roles in international organizations, media, or diplomacy.
Employers noted a lack of soft skills, ICT competencies, and industry-specific knowledge among graduates.
3. Competitiveness:
Arabic graduates are less competitive in multidisciplinary roles compared to peers from STEM or business fields.
4. Recommendations
Policy Reforms
1. Incentivize Enrollment:

Introduce scholarships and tuition waivers for students enrolling in the Arabic department.

Establish national quotas for Arabic graduates in civil service, foreign affairs, and education sectors.

2. Promote Awareness:

Conduct nationwide campaigns highlighting the value of Arabic in global communication, trade, and diplomacy.

Include Arabic as an elective language in primary and secondary schools to spark interest early.

Enhanced Institutional Support

3. Increase Funding:

Allocate a higher percentage of the budget to update library resources, digital tools, and infrastructure.

Support faculty development programs and research grants for Arabic lecturers.

4. Staff Recruitment and Training:

Hire more full-time lecturers to ensure consistent and quality instruction.

Train lecturers in modern pedagogical methods, including e-learning platforms and applied Arabic skills.

5. Resource Development:

Invest in digital libraries and online resources to expand access to modern Arabic materials.

Create partnerships with foreign universities to provide exchange programs and updated resources.

Curriculum Reform

6. Modernize the Curriculum:

Introduce courses in applied Arabic, including translation, interpretation, business communication, and Arabic for media.

Integrate ICT tools and digital learning modules into the curriculum.

7. Career-Focused Education:

Establish internship opportunities with embassies, NGOs, and international organizations.

Collaborate with industries to design courses that align with labor market demands.

Conclusion

Key Insights

1. National and state policies have yet to fully address the decline in Arabic department enrollment, with insufficient incentives for students.
2. Institutional support is inadequate, particularly in funding, staffing, and modern resources.
3. The curriculum needs significant reform to align with contemporary educational and job market needs.

Recommendations Summary

By incentivizing enrollment, modernizing institutional support, and aligning the curriculum with labor market demands, the Arabic department can attract more students and enhance the employability of its graduates. Collaborative efforts from policymakers, institutions, and industry stakeholders are essential to achieving these goals.
